

## **Chiromics Announces Non-Opioid Pain Program**

PRINCETON, N.J. – Chiromics LLC announces it is open to discussing the broad strategic partnering of its PAM-MOR™ with interested companies.

We envision a comprehensive and collaborative effort to develop first-in-class PAM-MOR™ drugs for registration against multiple unmet medical needs in the areas of pain and treatment for opioid abuse.

### **About Chiromics LLC**

Chiromics LLC is a drug discovery company that designs and synthesizes broadly diverse chemical compound libraries, using a patented “cascade catalysis” technology that produces drug-like molecules with a stereochemically defined framework. The novel structures and accessible complexity of these compounds expands the access to important disease targets and accelerates the hit-to-lead time for identification of novel drugs.

Formed in 2009 and based in Princeton, N.J., Chiromics has established collaborations with leading biotech and pharmaceutical companies for licensing and screening of its libraries against a broad array of disease targets. For more information, visit [www.chiromics.com](http://www.chiromics.com).
